NEW! Bushmaster Gas Piston Retro-Fit Conversion Kit for AR15/M4 type Carbines... (GP-GSR) \$399.95 Now you can easily add the Gas Piston System benefits of reliability, ease of maintenance, ability to fire a wider variety of ammunition, cooler running, and consistent function with this Bushmaster Gas-Piston Retrofit Conversion Kit for AR15 and M4 Type Carbines.

This Conversion Kit is a Patent Pending, short stroke piston conversion system that includes all the necessary parts to convert your gas impingement type carbine. The standard, and often problematic, direct-gas system is replaced with a lightweight operating rod and a low maintenance piston housed within a tubular structure that pins right into your existing front sight base – replacing the existing gas tube. Once installed, there are no more broken gas rings, droopy gas tubes or hot gases vented into the Receivers of your weapon. Instead, this conversion vents the gases under the hand guard and away from the operator. The high performance bolt carrier features increased mass, an integral impact lug and specially designed anti-wear features to protect your receiver. Unlike competing products, the Bushmaster Gas-Piston Retrofit Conversion Kit is readily installed into your factory Upper Receiver Assembly without permanent modifications to your carbine. You keep your factory receivers, barrel and bolt. Supplied with the kit are Heat Shielded M4 (oval) Type Handguards designed specifically to withstand rapid fire heat. The result is a cleaner and more reliable system that is sure to enhance the overall performance and reliability of your weapon. This Conversion Kit is fully functional for both semi-automatic and full-automatic weapons, and can be easily installed at home with simple hand tools.

In the Photo below, the Bushmaster Gas Piston Conversion Kit Components are installed. Why do the barrel and some parts look so discolored? – because this unit had just successfully completed – without failure – a...
